PROFILE

Technical support engineer who builds the tools the support team runs on. Designed and shipped eMonitoring at Ceiba Healthcare — the internal platform the bench now uses to reach and repair 2,200+ bedside devices across 120+ hospitals, replacing a four-tool manual routine (VPN, SSH, spreadsheet, Zendesk) with one browser workflow. Its MobileCart installer, which I wrote, deploys an 11-phase monitoring stack from a single double-click. Day to day: Linux production systems, PostgreSQL and Grafana in a zero-downtime clinical environment, on a rotating 3-shift schedule. B.Sc. Electrical & Electronics Engineering; trilingual EN / TR / AR.

WORK EXPERIENCE

Technical Support Engineer

Ceiba Healthcare · Aug 2023 – Present

- Designed and built eMonitoring (see Projects) — the support team’s platform for bed inventory, device checks, remote box access, VPN and server registers, ticketing and audit
- Wrote the MobileCart Automated Installer inside it: an 11-phase monitoring stack (PowerShell, Prometheus, Grafana) deployed from one double-click, then re-verified against 15 telemetry checks on every page load so a setting Windows quietly undid is visible instead of assumed
- Maintain Linux (Ubuntu) production systems in a zero-downtime healthcare environment; isolate and resolve complex failures through deep log analysis on Linux and Windows, and keep SSH / VPN running
- Manage PostgreSQL databases — insertion, retrieval, auditing and integrity validation; monitor service health on Grafana across a rotating 3-shift schedule, and author the documentation the team works from

GCC & Turkey Manager

EPI-UPS (Part-time) · Apr 2022 – Present

- Promoted from Technical Support Engineer to GCC & Turkey Manager — recognised for technical expertise and commercial results delivered from day one
- Own the full regional sales cycle: prospecting, technical presales, proposals, contract negotiation and key account management across the GCC and Turkey markets
- Lead site surveys, installation planning, commissioning and enterprise after-sales support for systems from 1 kVA to 1,200 kVA; built and maintain the company website that drives the region’s inbound leads

↑ Promoted Jan 2026

CEO & Founder

Seventist · Apr 2022 – Present

- Founded and run a B2B event services company — VIP fleet, simultaneous interpretation (20+ languages), exhibition logistics and 3D stand design for corporate congresses and trade fairs
- Built the company platform from scratch and am automating its front desk with n8n — inbound email triage, drafted replies and Slack escalation for anything urgent

Technical Support Engineer

3BFab — 3D Printing Innovation · Apr 2022 – Aug 2023

- Managed the full customer lifecycle across multiple international regions — from product demonstrations through on-site installation, hands-on training and long-term after-sales support
- Calibrated industrial SLA / resin 3D printers; diagnosed and resolved hardware failures on site, delivering root-cause solutions directly to clients in the field
- Coordinated multilingual client communications and produced weekly and monthly performance reports

Technical Support Engineer

Innovasis UPS · Jun 2021 – Apr 2022

- Delivered multilingual global technical support (EN / TR / AR) — UPS commissioning, diagnostics and customer training across multiple time zones
- Performed inverter / rectifier board diagnostics; conducted on-site load and battery validation using oscilloscopes and precision instruments
- Component-level circuit board repair (resistors, ICs, capacitors) to international standards

EDUCATION

B.Sc. Electrical & Electronics Engineering

Firat University

2016 – 2021

Associate of Computer Programming

Anadolu University

2023 – Present

PROJECTS

Next.js · TypeScript

eMonitoring — Hospital Fleet & Bedside Operations Platform

The internal platform Ceiba Healthcare’s support team runs on. It merges three separate bed registers into one searchable record, opens an SSH console onto 2,200+ bedside devices across 120+ hospitals, and turns a finished check into a one-click Zendesk ticket — replacing a four-tool manual process (VPN, SSH, spreadsheet, Zendesk) with one browser workflow. It also covers the cart fleet end to end: the MobileCart Automated Installer I wrote deploys an 11-phase monitoring stack (PowerShell, Prometheus, Grafana) from a single double-click, and the platform then onboards each cart and re-verifies that install against 15 telemetry checks on every page load.

Web · n8n

Seventist Platform

B2B event services platform I built and run. Adding an n8n agent that triages inbound email, drafts replies and escalates urgent enquiries to Slack.

Web

EPI-UPS Corporate Website

Regional corporate site built from scratch. Catalogue from 1 kVA to 1,200 kVA; the inbound lead channel for GCC and Turkey.

n8n · AI

Social Media AI Agent

Autonomous agent that writes on-brand content per platform format and publishes to Instagram, X and LinkedIn on a schedule.

Python

Web Intel Scraper

Deep-crawls a site from one starting URL and extracts company, email, phone and country into a sortable Excel report.

Python

Bulk Email Automation

Reads contacts from Excel, filters by language code and sends personalised EN / TR mail over SMTP with full error handling.
